

Multiplexer

The Transceiver Multiplexer (MUX) allows up to 8 RTA devices to be linked through a single radio link. Primarily used on ramp control sites, the Transceiver Multiplexer removes the need for trenching and cabling to signs around the site. It will directly connect to a field processor and send all communications to field devices by local radio. It requires no setup and is ready to use as soon as it is installed.

Features

- 8 x RS232/RS422 Serial Inputs
- 915MHz Spread Spectrum Data Radio
- Up to 5km Coverage
